Dana,

I attached a track-changes version of the issue memo with one small change and a comment. On the Excel sheet, my only comment is that 0.247 mg/kg-lipid is ATSDR's current estimate of background PCBs in breastmilk (down from the 0.32 used at Housatonic). I don't know whether you want to mention that or not. The source document is ATSDR's tox profile on PCBs.

Attached is the issue summary that I prepared for Deb Yamamoto as she will be the first manager in Seattle that we talk to. I thought it would be good to get this out to all four of you today since we are sort of in a time crunch. Eric, I tried to cover your concerns. Mike, please check my numbers in the EXCEL sheet. Mike, as you suggested in your e-mail today, I can talk tomorrow afternoon if any of you want to.
